PROFESSIONAL SUMMARY

DevOps Engineer with hands-on experience in CI/CD pipelines, cloud infrastructure, and automation using Docker, Kubernetes, Jenkins, Terraform, and Ansible. Proficient in AWS services (EC2, S3, VPC, IAM, EKS), Linux administration, and scripting in Bash and Python. Experienced with Boomi AtomSphere across multi-environment deployments driven to deliver scalable, reliable DevOps solutions.

EDUCATION

SRK Institute of Technology

Bachelor of Technology in Electronics and Communication Engineering

Andhra Pradesh, India
2025

EXPERIENCE

Associate Integration Admin TGH Software Solutions (IT Services & Integration)

Dec 2025 – Apr 2026

- Managed and monitored CI/CD deployment pipelines on Boomi AtomSphere Platform across Dev, QA, and Production environments, supporting version-controlled and stable releases across 3 environments.
- Collaborated with cross-functional teams to validate integration workflows and resolve deployment-related issues before production releases.

PROJECTS

Containerized Multi-Tier Application with CI/CD Pipeline

Docker, Kubernetes, AWS EKS, Jenkins, Terraform

- Designed and containerized a 3-tier web application using Docker, deployed on AWS EKS with horizontal pod autoscaling to handle variable traffic loads.
- Built an end-to-end Jenkins CI/CD pipeline with automated testing, staged rollouts, and zero-downtime production deployments.
- Automated server provisioning and configuration using Ansible playbooks, reducing manual setup effort and deployment inconsistencies.

Multi-Tier AWS Infrastructure Automation

Terraform, AWS EC2, VPC, ALB, Auto Scaling, CloudWatch

- Architected and deployed a production-grade 3-tier infrastructure on AWS across multiple Availability Zones using Terraform, ensuring high availability and fault tolerance.
- Configured a secure VPC with public/private subnet segmentation, NAT gateway, and security groups following AWS Well-Architected Framework best practices.
- Built a CloudWatch monitoring dashboard with custom metrics and automated alerting, enabling proactive issue detection before user impact.

Serverless API with Container Integration

AWS Lambda, API Gateway, DynamoDB, Docker, Python

- Developed a RESTful API using AWS Lambda and API Gateway for CRUD operations.
- Integrated DynamoDB for storage and implemented authentication and input validation.
- Optimized backend performance by 40% through connection pooling strategies on DynamoDB queries.

Database Management with Infrastructure Automation

AWS RDS, MySQL, Terraform, CloudWatch

- Provisioned MySQL database on AWS RDS using Terraform and Ansible.
- Configured Multi-AZ deployment and backup settings for availability and data safety.
- Developed performance tuning scripts improving average query execution time by 35%, reducing application latency.

SKILLS

Cloud & Infrastructure: AWS EC2, VPC, RDS, S3, ALB, Auto Scaling, CloudWatch, IAM

Containerization & Orchestration: Docker, Kubernetes, Docker Compose

CI/CD & Automation: Jenkins, GitHub Actions, Terraform, Ansible

Version Control: Git, GitHub

Scripting & OS: Python, Bash, Linux (Ubuntu), Windows

Monitoring & Security: Prometheus, Grafana, CloudWatch Alarms, Security Groups

Integration Platforms: Boomi AtomSphere
